regroup_variant

all

```
graph TD; A[trimmomatic] --> B[snippy]; B --> C[take_tab_path]; C --> D[regroup_variant]; E[fastQC] --> F[all]; D --> F;
```

The diagram illustrates a bioinformatics workflow. It begins with a box labeled 'trimmomatic' (orange border), which points to 'snippy' (green border). 'snippy' points to 'take_tab_path' (blue border), which in turn points to 'regroup_variant' (red border). A separate box 'fastQC' (green border) also points to 'regroup_variant'. Finally, both 'regroup_variant' and 'fastQC' point to a final box labeled 'all' (teal border).
